CATALOGUE NOTES

The product sections of this catalogue are divided into 7 main categories and if available, into sub categories. These are marked on the top left corner of the page.

The product description (blade length, handle variations) only refer to the image to the right. All available product variations of that blade length are listed below the product description with their respective product codes.

PRODUCT CODES

STEEL	BLADE CODE	LENGTH	HANDLE CODE
2 700 15 115	2 <mark>700</mark> 15 115	2 700 <mark>15</mark> 115	2 700 15 115
2 700 15 113	2 700 15 113	2 700 15 113	2 700 15 113
2 700 15 1135	2 700 15 1135	2 700 15 1135	2 700 15 1135
2 700 15 114	2 700 15 114	2 700 15 114	2 700 15 114
2 700 15 200	2 700 15 200	2 700 15 200	2 700 15 200
he steel type is indicated by the irst digit.	The Blade code is indicated by the 2nd group of digits in the product code.	Blade length is indicated by the 3rd group of digits in the product code.	Handle codes are indicated by the last 3 digits of the product code.

OUR HISTORY

1926

Edward Godhart (1884-1968) arrives Auckland from Sheffield and starts to make small batches of wooden handled butchers knives from shear steel. Edward changed his name officially to Goddard in 1946.

1927

E Goddard Ltd, started business behind the Rialto in Newmarket. Some years later moved to Mortimer Pass.

1930's

Depression in NZ and Edward's son Roy joined the business.(Later he married and in about 1956 his two sons drowned while fishing off Bucklands Beach leaving a daughter)

1940

The War years: business was growing with supply to Retail Butchers the Freezing Works and the Fishing Industry. Also combat knives were made for the NZ and US Pacific Fleet and Defence forces. Difficult times sourcing raw materials with licencing and import restrictions

1945

"Victory" name registered in New Zealand and Australia to celebrate Peace and the Allies winning the war. Later in North America UK and Europe.

1960's

Roy Goddard takes ownership of E Goddard Ltd from his father.

1975

Robert Tattersfield buys the company from Roy Goddard.
The next five years were difficult financially for E Goddard Ltd.

1976

First Injection Moulding Machine required as the Freezing Works required plastic handles as wood handles were being phased out.

Also relationship started with machinery suppliers from Solingen Germany

1986

Factory relocated from Newmarket to Marua Rd, Mt Wellington.

1999

John Bamford purchased the company from Robert Tattersfield. CNC and Robotic machinery introduced.

2013

Supplied Emirates Team NZ with XTB 1 3D printed Sailors Knives.

2019

Gareth Hughes purchased the company from John Bamford.

The N.Z. Cutlers' Co. in Auckland started operations in December last year upon the arrival of Mr E Goddard, a cutler and hand-forger of Sheffield. He comes from a family known for generations as skilled craftsmen. Sheffield made its name by its hand forged knives, but today has lost its (British) empire trade by the introduction of drop forged or machine made articles. In 1914, Sheffield could boast of 350 hand-forge craftsmen; today, only a handful remains. To regain this premier position, the N.Z. Cutler's Company has introduced to this country the original made-hand article.

Extract from the Evening Post (N.Z.) 21 July 1927.

THE VICTORY KNIFE

We are a small family firm based in the heart of Auckland, New Zealand.

Compared to other large knife manufacturers, our strength lies in the fact that we focus on small quality controlled batches, ensuring that each knife is correctly cared for from start to finish.

This allows for the highest level of precision throughout the entire process and guarantees that we have consistency in the blades' micro structure.

VictoryKnives has grown to be synonymous with high quality and robustness by the industry professionals who demand more than any from their tools.

All major meat and fish processing companies in New Zealand and Australia use VictoryKnives and commercial divers all over the world request the Victory Divers Knife.

The stainless steel blade hardness is 54-55 HRC. The Victory stainless steel blade has a sub-zero (-80°C) quench after hardening. The benefit is a strong, hard and wear resistant blade with improved edge retention.

VictoryKnives continues to thrive today by maintaining the highest standards in manufacturing and materials, building its reputation for unsurpassed quality - giving excellent value. We work closely with companies to help them solve their specific problems. We collaborate with our colleagues in Germany and Japan importing their steel and ensuring our heat-treatment and processing are world class.

Whether for sports, industry or in the home, VictoryKnives has a reputation for unsurpassed quality, made for industry professionals, developed for adventure and built for a lifetime.

VICTORY HANDLES

Handles are made from Polypropylene (PP) to meet maximum hygiene standards or Thermo Plastic Elastomer (Santoprene) as well as Wood for traditional use. Minimum quantities may apply.

Default Handle Colours: 101-White, 111-White, 113-White, 114-White, 115-White, 113-White, 116-Yellow, 116H-Yellow, 117-Black, 118-White, 200-Blue, 202-Blue, 212-Black & 110-Wood

PROGRIP™ HANDLE RANGE

The Progrip™ Handle is a thermo-plastic elastomer handle, these materials are MAF and FDA approved.

The Progrip™ Handle gives a soft and tactile feel, it doesn't compromise on comfort when used over a full working week.

Progrip $^{\text{TM}}$ now comes in a wider range of colour to suit the desired application in meat processing facilities and beyond.

THE VICTORY KNIFE PROCESS

1. RAW MATERIALS

VictoryKnives imports the best high-carbon steel from Japan and chromium steel from Germany under ISO 9001 conditions as used by leading cutlery and surgical instrument manufacturers. The composition of our non-stain steel is highly consistent and the selected alloying components allow it to stand up to harsh sterilisation and marine environments.

Benefits:

- No compromises in sourcing the best steel.
- Ensure traceability all the way back to the source.
- Optimised blade materials, superior edge resilience and corrosion resistance.
- USFDA approved materials, easy to clean.

2. LASER CUTTING

Extremely accurate & flexible cutting processes ensure that each blade is of a consistently high standard. We have the ability to adapt the blade shape to customise runs for niche industry requirements.

Benefits:

- Precise customisation to ensure you have the right solution.
- High accuracy manufacturing from the beginning.

3. HEAT TREATMENT

Critical to our success, with 90 years of refinement, our processes focus on small batch sizes and strict quality control to ensure all knives meet the highest standards. Our end users expect consistency in our steel hardness and steel quality. The free hanging blade stock is heated to +1000°C before rapid quenching, resulting in increased martensitic transformation, developing uniformly. A sub-zero quench reduces the retained austenite content, followed by a double temper for hard wearing and long lasting performance. 54 on the Rockwell scale gives good edge retention which can easily be sharpened.

Benefits:

- Outstanding material properties.
- The best quality cutlery.
- Refined grain structure.
- Resilient cutting edge.

4. GRINDING

The 5 axis CNC grinding machines produce full taper blades of exceptional precision and consistent geometry. This reduces the cutting resistance, minimising operator effort and strain.

Benefits:

- High edge accuracy.
- Low resistance taper.

5. POLISHING

Blades are polished to further increase corrosion resistance; specific blades go through a secondary stage, readying the materials for the extreme conditions of marine applications. The finish also results in a decreased cutting friction.

Benefits:

- Superior corrosion resistance.
- Reduced cutting friction.
- Easy to clean.

6. SHARPENING

Benefits:

Superior knife edge.

• Sharp out of the box.

7. HANDLES

Like our blades, our handles are application specific, refined over years spent collaborating with industry professionals.

Benefits:

Robust, Practical and safe.

8. QUALITY CONTROL

Internally every batch is tested for its Rockwell hardness, ensuring that \pm 54 HRC is attained. Externally the micro-structure is tested and the hardness is verified. A series of QC checks are made throughout the manufacturing process.

Benefits:

• Ensuring high consistency.

State of the art 6-axis robotics and traditional hand sharpening techniques are used to

knives consistently meet the performance requirements of our end users.

produce the final sharpened, polished cutting edge. Every measure is taken to ensure our

O WWW.VICTORYKNIVES.CO.NZ WWW.VICTORYKNIVES.CO.NZ

WE ARE MADE FOR PROFESSIONALS

"Following an occupation as a means of livelihood."

Since 1927 VictoryKnives has been working hand in hand with hardened industry professionals.

The type of people who care about doing the best job possible with the best tools available.

Through decades of discussions and development with experts in the food processing industry, VictoryKnives has evolved to become the standard, which is no simple task.

That's because each knife shape is specifically designed to enable efficiency and professionals can feel the difference.

VictoryKnives, we are made for professionals.

HIGH CARBON STEEL

Traditionally all knives were made from high carbon steel, the benefit of high carbon steel is wear-resistance, meaning it stays sharper for longer. What makes it different to stainless steel is alloy content, carbon steel has under 10.5% alloy content while stainless steel must contain more than 10.5% chromium. Consideration needs to be given to care as carbon steel does oxidize so the steel must be oiled and maintained on a regular basis.

WE ARE MADE TOUGH

"Strong enough to withstand adverse conditions or rough handling."

We are a proud nation of "do-it-yourself" people, tough and laid back at the same time. We embody the spirit of adventure, a trait inherited from our pioneering forefathers.

VictoryKnives embody the same aspects of tough living in New Zealand, they are knives formed and conceived as a result of their direct environment.

VictoryKnives, we are made tough.

32

HUNTING KNIVES

HUNTING KNIVES

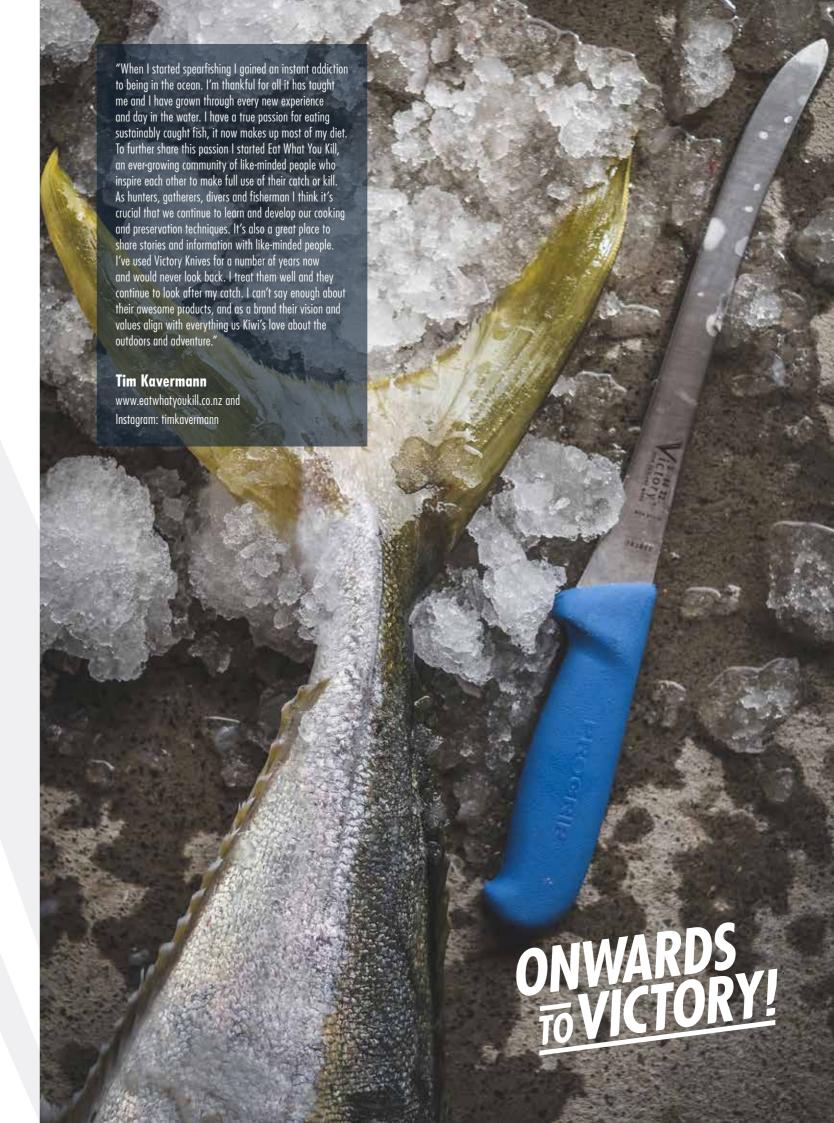

WE ARE MADE TO RESIST

"To withstand, strive against, or oppose."

Wilderness is part of New Zealand's heritage. From our rugged snowy mountain tops to our dense bush to our unforgiving seas, New Zealand for all accounts is a wild country. A country that moulds its inhabitants to adapt and resist.

Our knives are no different, we have created them to go where you go, to resist all that our conditions will throw at you and never falter. That's why we choose only the best steel, why we have spent decades refining our heat treatment process, and why we meticulously polish every knife.

VictoryKnives, we are made to resist.

WE ARE MADE FOR A LIFETIME

"The period of existence of an individual human being, animal or plant."

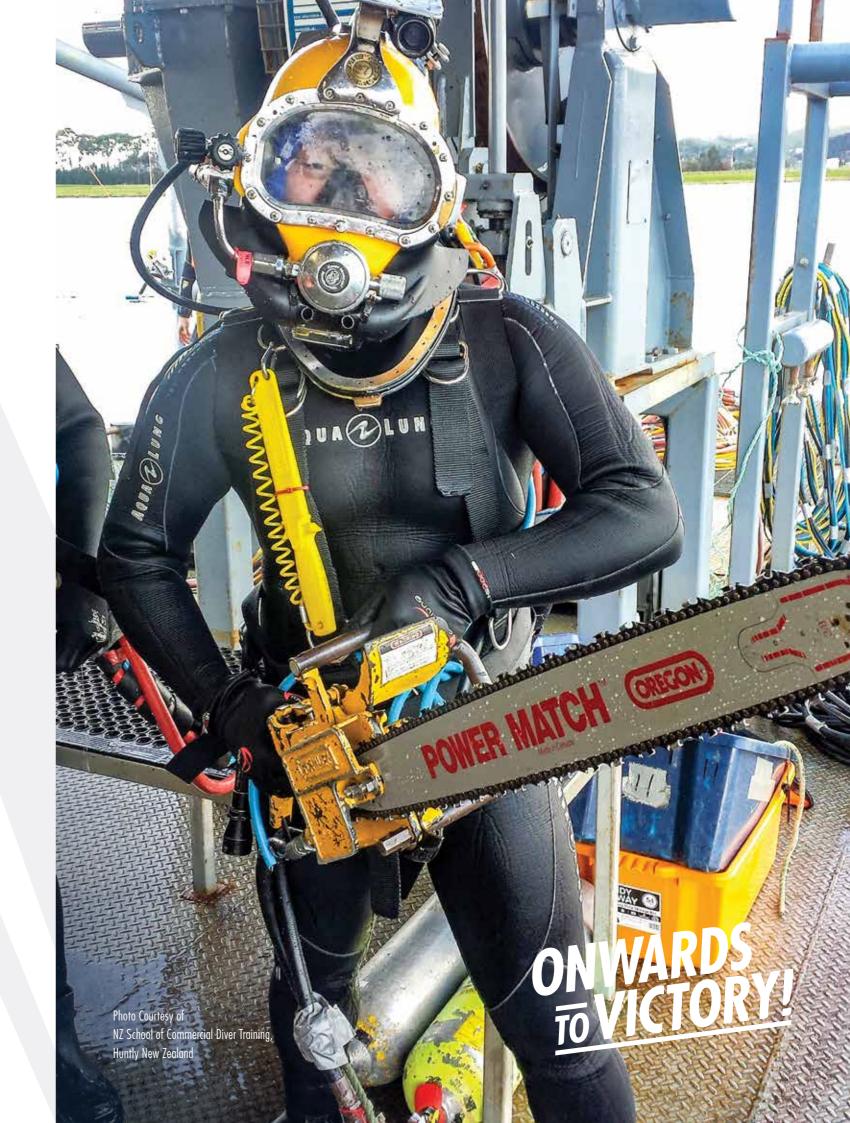

Life in New Zealand is long, tough, but most importantly, bloody good fun.

We make our knives for New Zealand and its conditions, to go with you whether in the dense forests of the The Kaimanawa Ranges or the salty rocks of Great Barrier Island.

We make them to last a lifetime. They are tough, resistant and of quality just like the people who use

If treated with respect a Victory knife will undoubtedly last the test of time, that's why we give all our knives a lifetime warranty.*

VictoryKnives, we are made for life.

WE ARE MADE FOR QUALITY

"A distinctive attribute or characteristic possessed by someone or something"

Our manufacturing processes have evolved over time to incorporate modern day technology. From our unique small batch heat treatment process, to our 5 axis grinding machines, to our state of the art sharpening robot and our corrosive resistant polishing techniques, you could say that our knives have been given some thought.

Quality in a person is something we respect. Quality in a product is something we admire. We make our knives to be of the same high standard as the person using them.

VictoryKnives, we are made of quality.

In extreme situations where nothing less than high performance and precision are acceptable, ensure that you reach for your VictoryKnives — Extreme Rope Blade.

VictoryKnives developed the Titanium blade for Emirates Team New Zealand's use in their 2013 America's Cup. The Extreme Rope Blade combines cutting edge design and advanced 3D manufacturing technology, resulting in a lightweight titanium blade that boasts extreme strength, and an ultra sharp serrated edge, ensuring that you are never left high and dry.

180mm

PROFESSIONAL RIBBED

FLÜGEL CSS STEELS

More than 100 years of high-quality products - Made in Solingen, Germany.

Flügel CSS is one of the leading manufacturers of sharpening steels worldwide. They produce very high-quality steels for many of the leading brands globally. Victory has decided to import only the best quality steels we can source and following extensive testing inside the New Zealand processing environments Flügel came out as a clear winner.

DIFFERENT SURFACES INCREASE THE CUTTING PERFORMANCE OF THE KNIFE:

MEDIUM CUT

This surface is mostly suitable for food preparation in restaurants, seafood industry and domestic use. The grooves are narrower and more raised (approx. 6 to 7 teeth per mm). This assures a more aggressive sharpening effect for excellent cutting characteristics and edge retention.

FINE (MICRO) CUT

The fine cut is used in meat preperation where a fine and long-lasting edge is essential. A few strokes maintain the sharp edge longer in between re-grinding.

THE POLISHED STEEL

The unique purpose of this sharpening steel is to draw up the microscopic teeth of the cutting edge to assure a very smooth cut. Several applications of hard-chroming like those for the medium and fine cut, make the surface extremely wear resistant.

KNIFE CARE & SAFETY

STEEL YOUR KNIFE REGULARLY TO HELP RETAIN THE EDGE.

This is critical for performance, a quick touch up either side will help maintain the edge and therefore give far better cuts.

WASH AND DRY YOUR KNIFE AFTER USE.

It is recommended not to use a dishwasher, handwashing isn't that difficult for your prized tool.

DO NOT BURN OR OVERHEAT THE BLADE WHEN SHARPENING.

This will cause damage on blade properties.

ONLY USE THE KNIFE FOR ITS INTENDED PURPOSE.

We have over 46 different blade shapes so use the right tool for the right job, get in touch with us if you have any questions about what knives to use.

STORE IN A SAFE AND DRY PLACE.

Carbon steel knife should be oiled immediately after use to help prevent corrosion.

VICTORY BRANDS

VictoryKnives also manufacture other well known knife brands, synonymous with quality, known world-wide, proven and tested in the harshest environments, the Victory ethos of creating the best is shown throughout our brands. With specialised features that are unique to each knife, we ensure we can cater for any task that is required.

GRES HIGH CARBON STEEL

Very well known with the older generations in the New Zealand rural community, Green River was the only knife you needed. Green River Knives are made from the highest quality Japanese high carbon steel. High carbon steel is known for having greater wear resistance meaning the knife stays sharper for longer. The Green River range now consists of Skinning, Boning and General Purpose Hunting Knives.

It's important to note that high carbon steel requires extra care due to the reduced amount of Chromium in the steel as it will oxidise. To prevent this Green River Knives need to be oiled after use to avoid corrosion.
